

# **Performance Report**

#### **Client Details**

Bayer Bioscience Pvt Ltd Hyderabad, India

#### **Equipment Details**

FRASCOLD make Model No. D3-18.1Y

R-407 Cold Room

# **Result Summary**

Energy Saving with MaxR100 - KWH/Hour

# 13.14% Energy Saving

#### **Next Steps**

Deployment to the rest of their refrigeration and AC systems onsite.

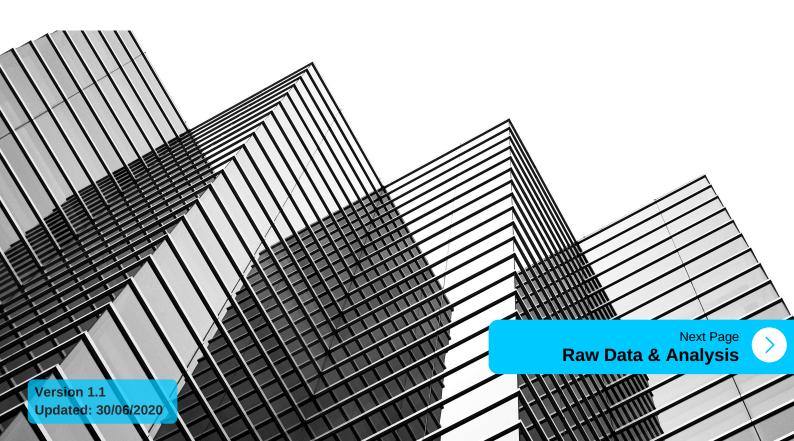

100 TR Units x2 | 4 TR units x 19 | 17 TR units x 4

#### **Measurement Method**

Data Logger connected to the AC unit.

**Pre Installation logging**: 23/12/2019 to 03/01/2020

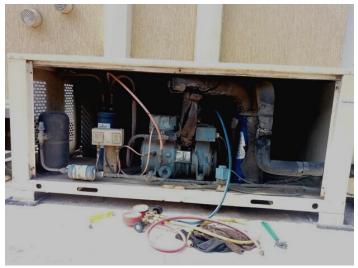

**Post Installation Logging:** 02/03/2020 to 14/03/2020

# FRASCOLD 4.0 TR

# **Compressor Details** Frascold Make **Condensing Unit**

Model: MD3-18.1Y

#### Location

Cold Storage

# **Capacity**

4.0 TR

# **Required MaxR100**

118.3 ml PoE

As per installation guide, any unit under 25TR will require 1 oz per TR of MaxR100

#### **Data Logger**

Data Logger installed at the power board, measuring the energy consumption of the unit.

For detailed Logging requirement, please refer to the testing protocol for MaxR100.

> **Next Page PRE Installation Benchmark**

# PRE Installation Benchmark

# **Total Running Hours**

251.4 Hours

# **Total Energy Consumption**

1700.6 kWh

#### **Note**

For daily data, please refer to the appendix A.

# **Average Energy Consumption / Hour**

6.76 kWh

#### **Average Load**

6.76 kW/Hour

# **Average Line-to-Line Voltage**

417.1 Volts

# **Average Line-to-Neutral Voltage**

239.4 Volts

#### **Average Current**

10.49 Amps

#### **Average PF**

0.865

#### Average RH in %

64.36%

# **Average Set Point**

-4 Degrees Celsius

#### **Ambient Temperature**

23.09 Degrees Celsius

# **POST** Installation Benchmark

# **Total Running Hours**

282.39 Hours

# **Total Energy Consumption**

1855.5 kWh

# Note

For daily data, please refer to the appendix B.

# **Average Energy Consumption / Hour**

6.57 kWh

#### **Average Load**

6.59 kW/Hour

#### **Average Line-to-Line Voltage**

418.8 Volts

# **Average Line-to-Neutral Voltage**

240.3 Volts

#### **Average Current**

9.67 Amps

#### **Average PF**

0.900

#### **Average RH in %**

46.1%

# **Average Set Point**

-4 Degrees Celsius

#### **Ambient Temperature**

28.41 Degrees Celsius

Observations & Conclusion

# **Comparison & Observations**

# **Comparison - PRE Benchmark VS POST Installation**

SR.NO	PARAMETERS	Bench Mark- Pre Data	Post Data
1	Total Running Hours	251.4	282.39
2	Total Energy Consumption in KWH	1700.6	1855.5
3	Average Energy Consumption / Hour in KWH	6.76	6.57
4	Average Load in KW/ Hour	6.76	6.59
5	Average Line to Line Voltage (VLL) in Volts	417.1	418.8
6	Average Line to Neutral Voltage (VLN) in Volts	239.4	240.3
7	Average Current in Amps	10.49	9.67
8	Average PF	0.865	0.900
9	Average RH in %	64.36	46.1
10	Average Set Point IN Deg C	-4.0	-4.0
11	Ambient Temperatures in Deg C	23.09	28.41

#### **Observations**

After comparing data collected from PRE and POST installation, we have the following observations:

## **Average Energy Consumption / Hour in KWH**

🔽 0.19 kWh / Hour

# **Ambient Temperature**

5.32 Degrees Celsius

# **POST** Installation Standardisation

#### **Actual Energy Savings (with change in average Ambient Temperatures)**

Before calculating actual savings, changes in ambient temperature between PRE and POST data period are required. Any increase in ambient temperature will affect the energy consumption of the AC unit, hence, adjustment to the POST data is required.

**Coeff. Of Performance** - the ratio of heat removed from a system to the energy required to remove the heat. The theoretical maximum is equal to the Kelvins. Even the perfect system decreases efficiency with increased outside temperatures, dropping around 2% per degrees celsius.

Considering the 5.32 Degree Celsius increase in ambient temperatures during POST installation logging period, the energy consumption should be standardised by increasing 10.64% during the period.

With consideration of the above, we have calculated the actual energy consumption during **POST MaxR100 Installation period**:

#### **Total Energy Consumption**

1855.5 kWh

# Decrease in Energy Consumption due to increase in ambient temperature in %

10.64%

#### **Actual Energy Consumption (POST)**

 $(1855.5 \times 10.64) / 100 = 197.4252 \text{ kWh}$ 

#### **Actual Average Energy Consumption (POST)**

1558.07/282.39 = 5.87 kWh / hour

SR.NO	PARAMETERS	Bench Mark- Pre Data	Post Data ( After adjustment due to increase in Ambient Temperature)
1	Total Running Hours	251.4	282.39
2	Total Energy Consumption in KWH	1700.6	1658.07
3	Average Energy Consumption / Hour in KWH	6.76	5.87
4	Average Load in KW/ Hour	6.76	6.59
5	Average Line to Line Voltage (VLL) in Volts	417.1	418.8
6	Average Line to Neutral Voltage (VLN) in Volts	239.4	240.3
7	Average Current in Amps	10.49	9.67
8	Average PF	0.865	0.900
9	Average RH in %	64.36	46.1
10	Average Set Point IN Deg C	-4.0	-4.0
11	Ambient Temperatures in Deg C	23.09	28.41

# Conclusion

#### **Energy Saving with MaxR100**

After adjustment to the POST data due to changes in ambient temperature during POST installation logging period, we can now calculate the energy saving for MaxR100 by comparing PRE and POST data logged.

#### **Actual Average Energy Consumption (PRE)**

6.76 kWh / Hour

#### **Actual Average Energy Consumption (POST)**

5.87 kWh / Hour

#### **Energy Saving with MaxR100 (%)**

 $[(6.76-5.87) / 6.76] \times 100 = 13.14\%$
